

I'm Ben Frederick, the division is Engineering Division within the materials Bureau and I work with the Core Drill Section.

I'm a Driller Tech; I've been a Driller Tech going on 3 years now. I'd say the same thing as what I tell my son, the state is a great place to come to work. MDT is obviously one of the better places to work within the state but it enables you to be able to make a living and stay within the state of Montana. My favorite thing about my job is obviously working outside and working with people I like surrounding me. Another thing is travel I get to travel a lot, I get to see different parts of the state it's amazing when you go to the Western part of the state is totally different from the Eastern part of the state and I get to see the whole state. We help communities, we give them better roads. We help to build better roads so they can allow for expansion within their own communities. Favorite things that I have for working with MDT is, I've worked in the private sector before and we've always had the tools to do the job, but since working for MDT is if you need a certain tool to help you do your job it's there. The resources are there for you to get what you need to complete your job.
