JOIN US ON FEBRUARY 27TH – MARCH 1ST FOR THE ANNUAL TEACHERS CONFERENCE

The MT Aviation Teacher's Workshop is an exciting way to promote aviation in the classroom. This three-day workshop will give teachers insight to aviation by way of presentations from experts in the field, student centered aviation stations and an actual flight in a single engine aircraft. Teachers will learn how to integrate aviation education through the use of STEM (Science, Technology, Engineering, and Mathematics).

Participants will also learn the basics of aerodynamics/flight physics, how to interpret an aeronautical chart, and become more familiar with traffic patterns & ATIS. Course topics will include SAR (Search & Rescue) and personal flight stories told by experienced pilots. This program is offered at no cost to teachers however, all participants are responsible for making their own hotel arrangements.
