

Storm Water Permit Winterization Checklist

BMP Winterization Checklist (Things to consider in addition to those on the regular MDT SWPPP Inspection Report/Checklist)

- Limit fall-time disturbance of surface area to only that which can be properly protected for snowmelt runoff?
- Schedule temporary or erosion seeding prior to ground freezing?
- Determine applicability of snow management BMPs and apply as appropriate?
- If accessible, consider clearing ditches of ice and snow accumulations before spring thaw in areas where blockage could result in significant damage or discharge to a sensitive water body?
- Evaluate wintertime access to maintain BMPs?
- Make sure all BMPs are in place and able to withstand spring thawing, snow melt conditions and runoff?

Notes/Comments:
